An Overview of Summer Research at Perry World House

Leah Lerner

PERRY WORLD HOUSE
UNIVERSITY of PENNSYLVANIA

Artificial Intelligence and Emerging Technologies

Project Summary:
Attempts to create two different tracking systems of AI-related information:
- A literature tracker that focuses on academic papers and longer think tank reports; largely examines public perceptions and ethical implications of AI
  - Emphasizing cross-national survey data
- A document that tracks shorter publications on defense innovation and emerging technologies

Military Inclusivity and Retrofitting

Project Summary:
Seeks to answer two main questions:
- How can militaries retrofit to support a more inclusive fighting force?
- Which militaries have done the most/least in this area?

Methodology:
- Reading through NATO documents and news articles for military investments in changes to be more accomodating for women
- Examining changes in uniforms, equipment, dormitories, etc.

Remoteness, Bias, and Decision-Making in Space

Project Summary:
Focuses on three categories of research in the realm of space:
- Perceptions of space - how well-informed the average citizen is, how they feel about it, and how much they justify the costs
- Undersea and deepsea - how the environment impacts the individuals operating there and their decision-making
- Science fiction - how it affects the audience's general knowledge of and sentiments towards space
